

OUT ON A LIMB

(Why is that?)

By: Roger Davis, Landscape Architect
Davis Design Group, Augusta, Georgia

- You have an area that obviously slopes but doesn't drain.
WHY IS THAT?
- All of a sudden we are having drainage problems we never had before. **WHY IS THAT?**
- There are existing French drains installed but the area is wet.
WHY IS THAT?
- You have an irrigation system where you have an area that is double or triple coverage but you still have a dry spot. **WHY IS THAT?**
- My grass used to look great but it has gone down hill over the years.
WHY IS THAT?
- My lawn is being ravaged by moles or voles. I've tried everything.
WHY ME?
- My October Glory and Red Sunset Maples are declining.
WHY IS THAT?
- I have a biologically filtered pond and I am having algae problems I never had before? **WHY IS THAT?**
- My pond has a build-up of crud on the bottom. **WHAT CAN I DO?**
- My hostas look great until August and then they look awful.
WHY IS THAT?
- My hedges are leggy at the bottom and I can't keep them full like they use to be. **WHY IS THAT?**
- **BUTCHERED CRAPEMYRTLES! WHY IS THAT?**
